**What is a cell?**

Page 2

Everything that lives

as one single cell starts out.

The cell divides and changes;

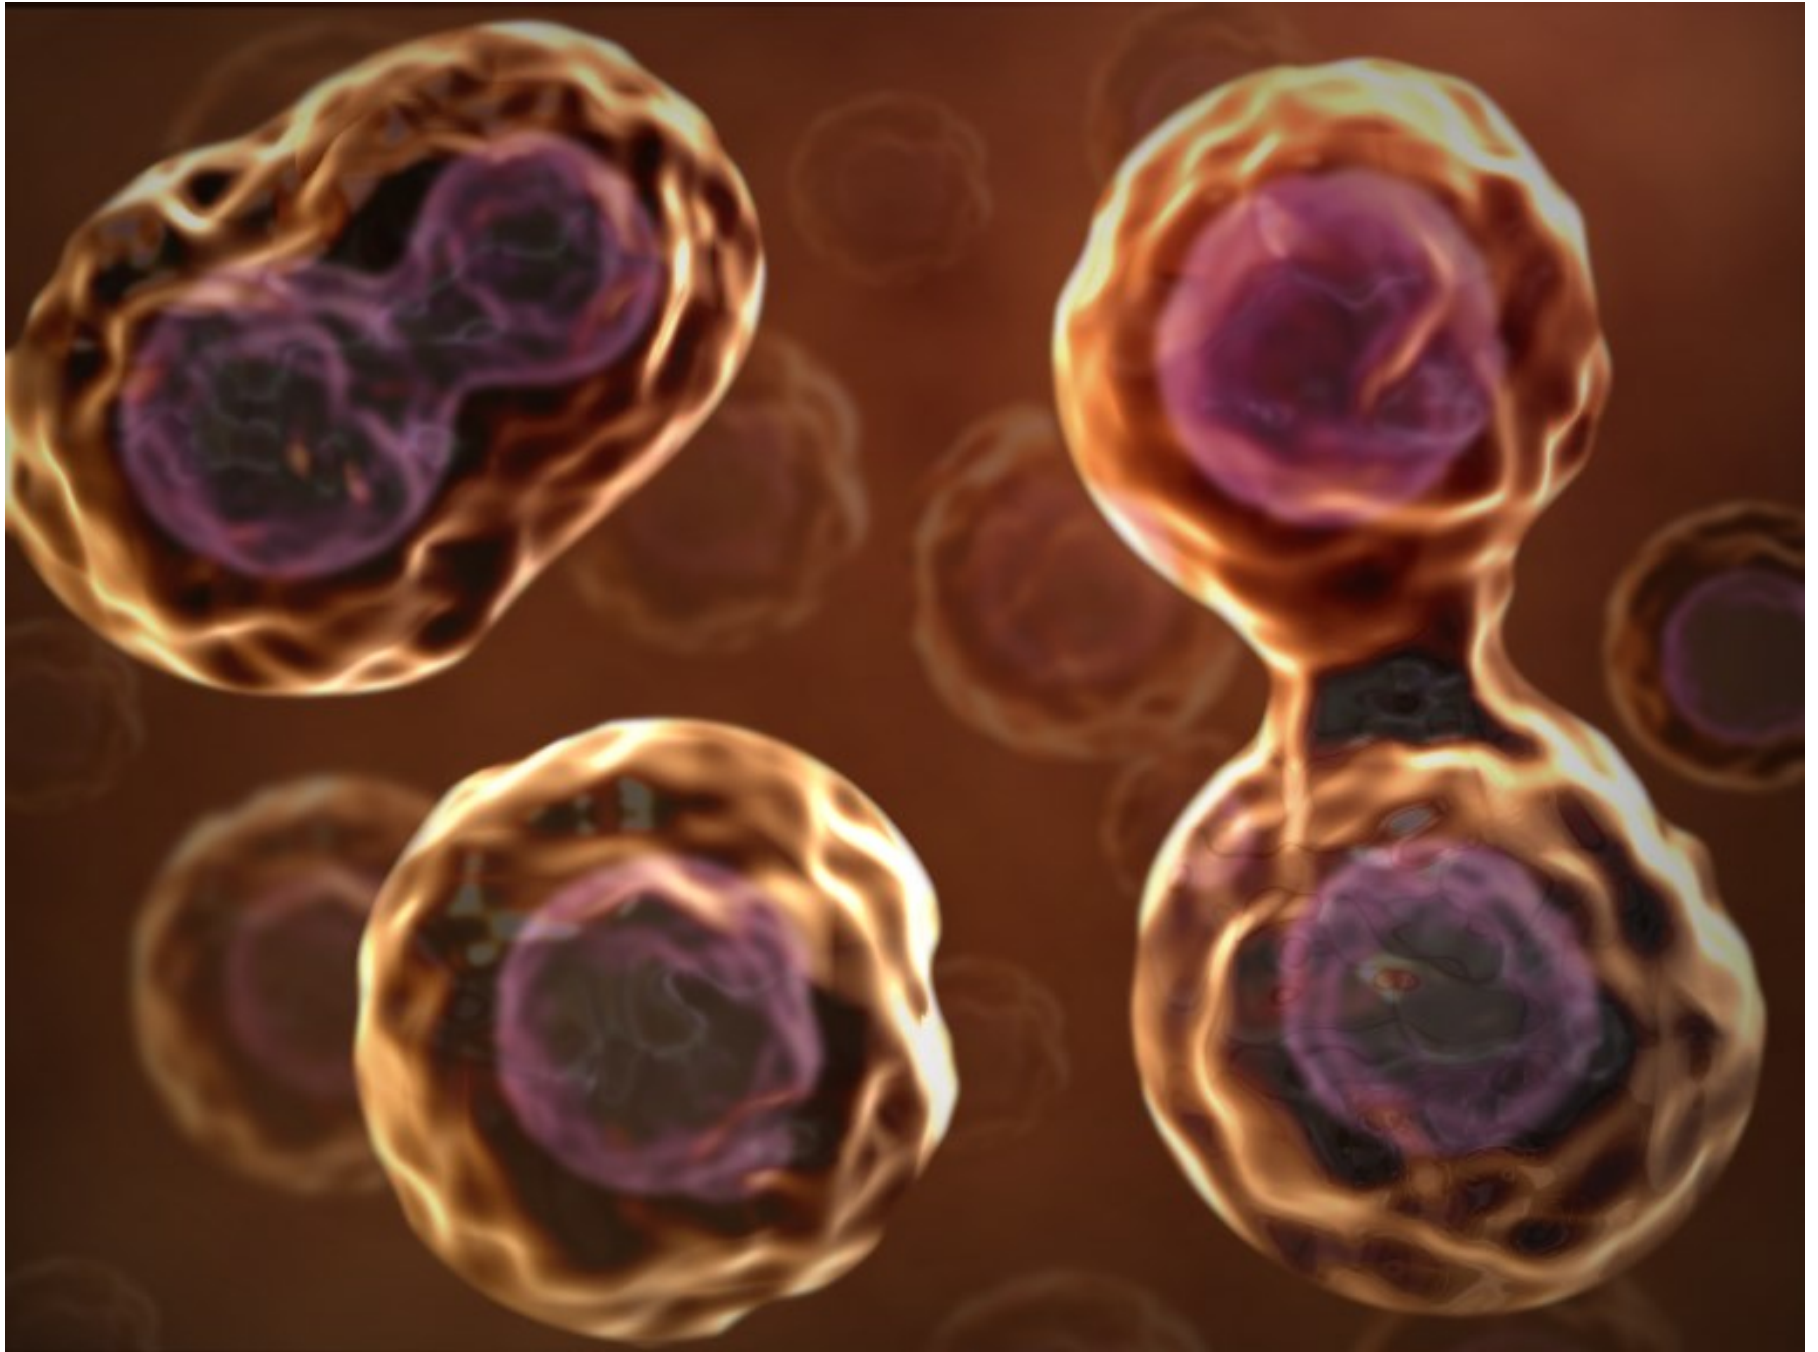

it's the way life's brought about.

Cells act like a body;

they breathe and eat and grow.

How each cell does function

only God does fully know.

Page 3

As cells divide and change,

they organize together,

Becoming different parts

like an eye, a bone, or feather.

In a plant some cells form roots,

others make the flower,

Each cell becomes what it should be,

through God's majestic power.

Page 4

Life can't come from non-life,

life needed God to be.

Our God gave life to matter,

to make a bird and tree.

Men are very clever;

they make all kinds of things.

But men cannot turn matter

into living beings.

Page 5

Every human being

as a single cell starts out,

Which grows into a person,

as God brings a life about.

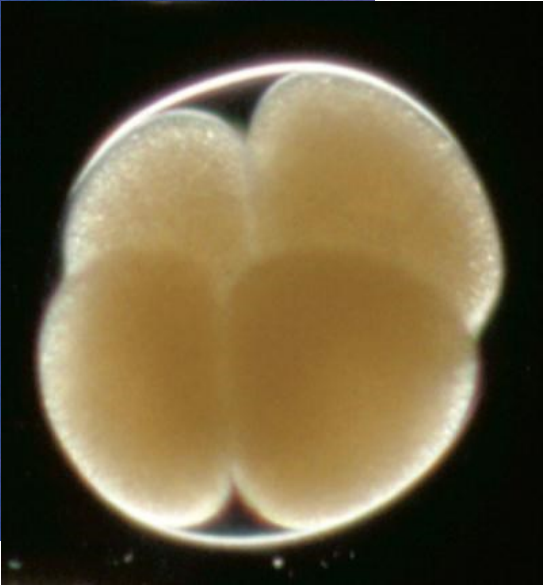

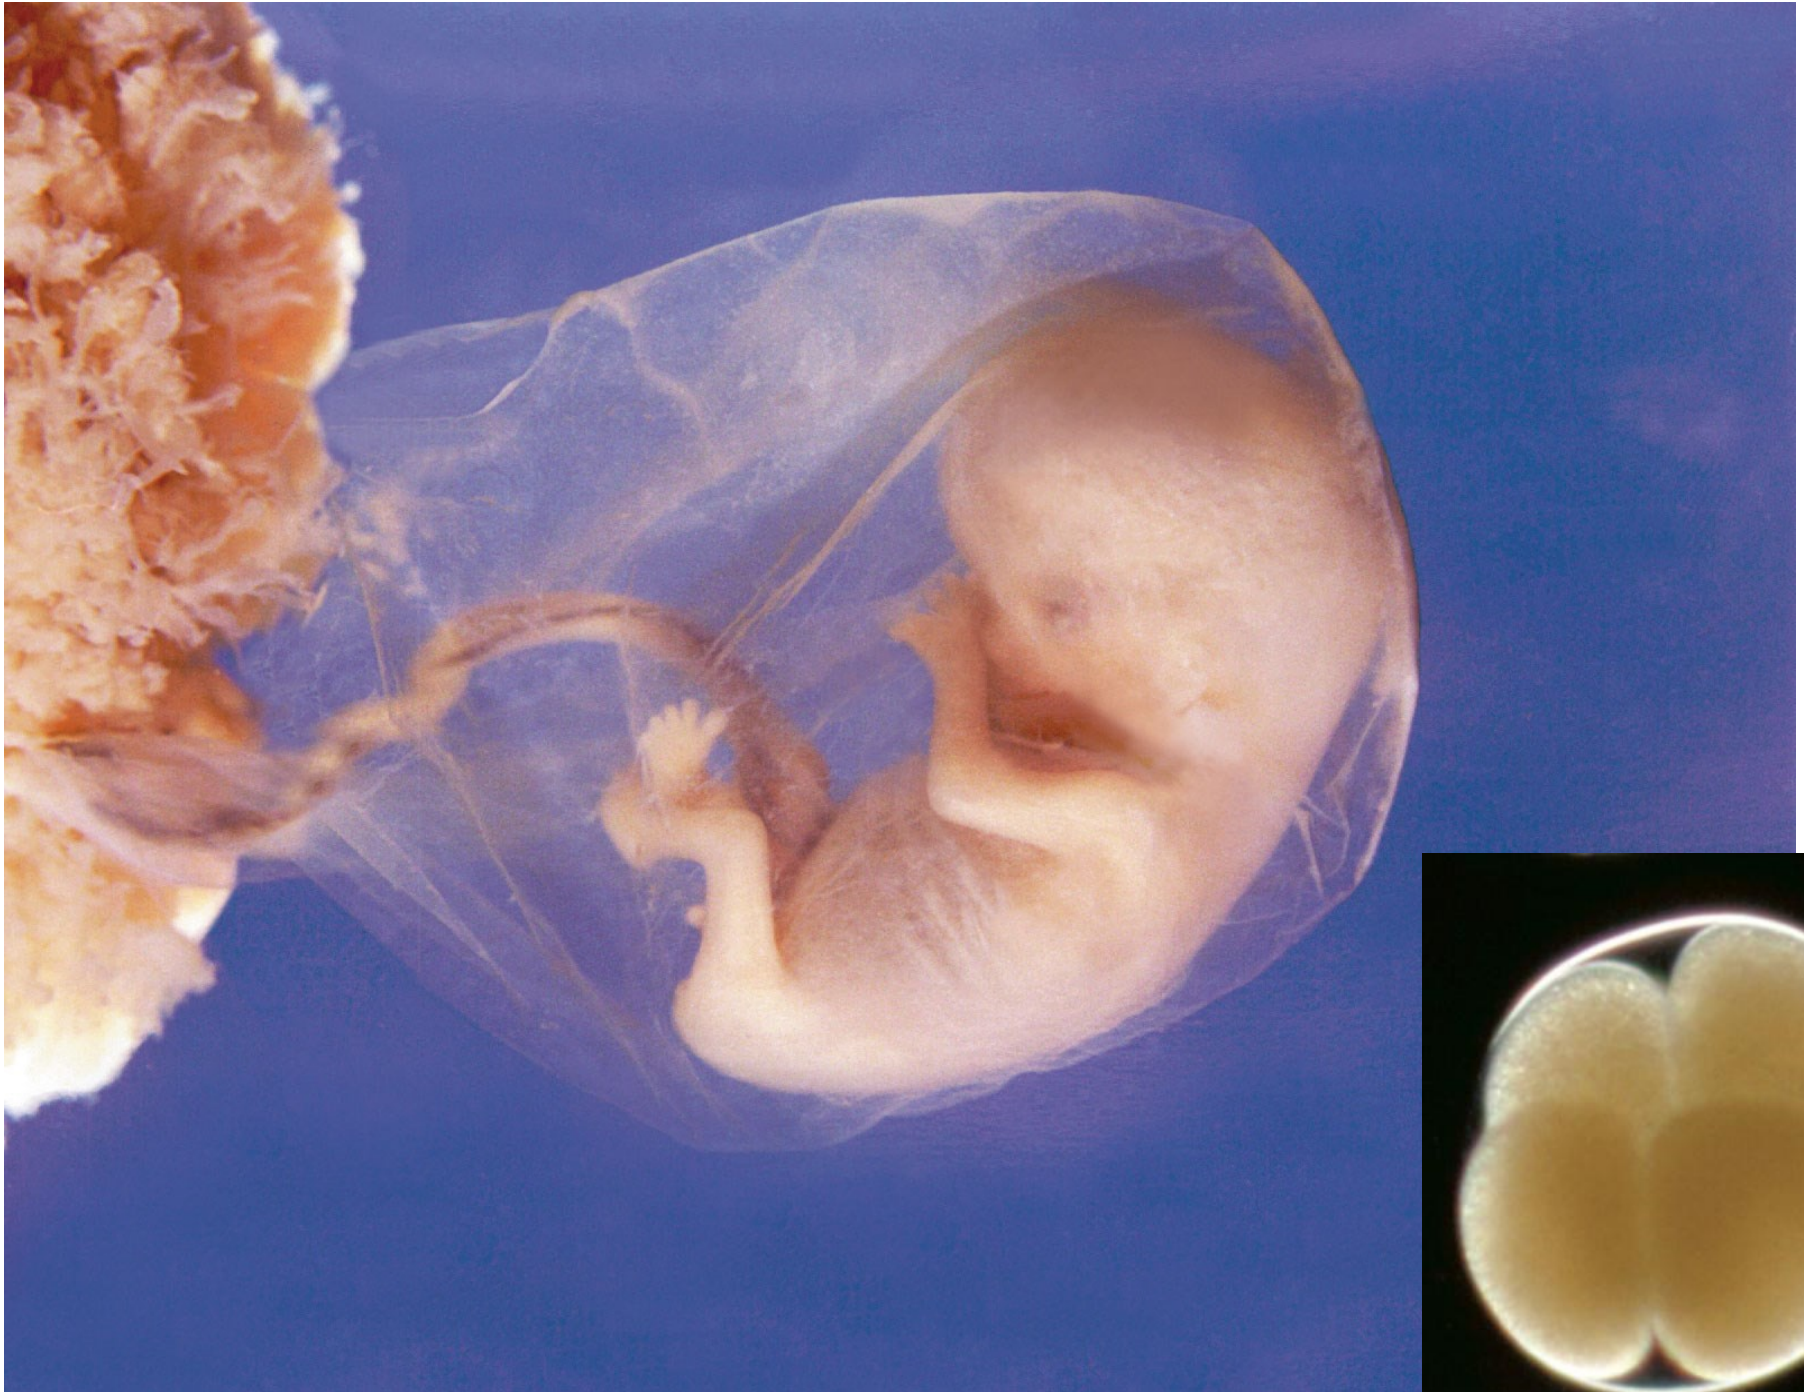

The life that we've been given

is because of God's great love,

So with every cell we're made of,

we should worship God above.

Page 6

Don't you think life is amazing?

Can you understand God's mind?

How does an animal develop,  
reproducing its own kind?

God designed each living thing,  
unique in its own way.

To such an awesome God  
we are to listen and obey.

Page 1

When God created living things

he put life into a cell.

And we know that everything God does,

he does it very well.

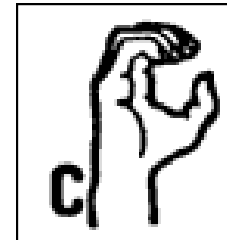

A cell is itty, bitty.

It's so small it can't be seen.

Our God puts cells together

to make a living being.

## What is a cell?

C—C

Make sign of "C"

Cells

Put index finger and thumb together in a circle facing out

So small they

Hold index finger and thumb straight out and move together

can't be seen

Point to eyes and shake head "no"

C—C—Cells

Same as above

Make up each

Bring hands up in front of body wiggling fingers living being
