

Bb

What are birds like?

Page 2

Bird babies hatch from eggs

laid inside a nest.

At first they cannot fly,

but can only eat and rest.

Their parents bring them food

until their wings grow strong.

Then they're pushed out of the nest

so they will fly along.

Page 3

Every bird has feathers

designed to help them fly.

They also keep their bodies warm

and in wet weather dry.

Feathers are of different types,

different colors too.

Some are soft, others strong,

depending what they do.

Flapping wings and flying

seems like lots of fun.

But there are birds stuck on the ground

that can only run.

Page 4

Every bird has a beak,

which come in different shapes.

Some are used for drilling holes,

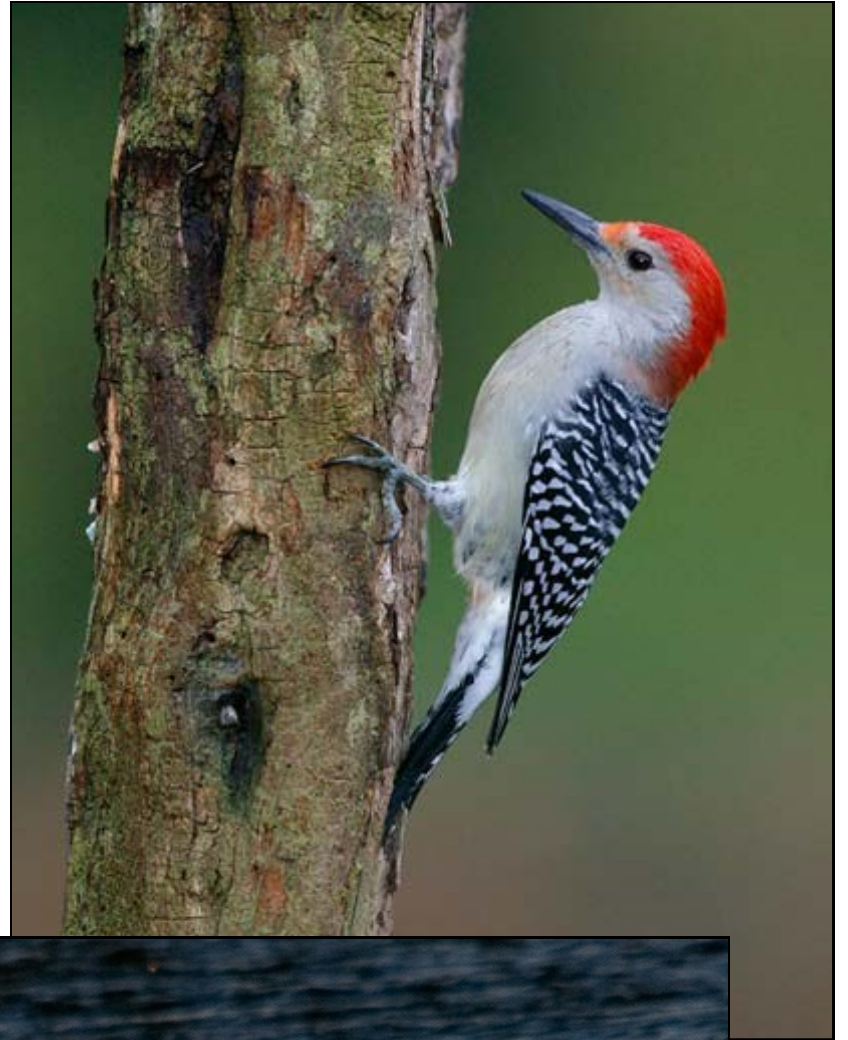

some to munch on grapes.

Still others use their beaks to dig

down into the sand.

Others snap up fish,

and don't even have to land.

Page 5

Depending on their purpose,
feet are different too.

Because for different uses

God designed them each to do.

Webbed feet work well in water
and in the mud don't stick.

Birds with talons capture prey
and with their feet are quick.

While others perch in branches
without a single care

Some can hop upon their feet
to get from here to there.

Page 6

And from studying how birds fly,
men learned principles of flight

So they could de-sign planes
and make them fly just right.

God's the great designer.

His creation's very good.

We need to learn from him
and praise him as we should.

Page 1

Birds are animals with wings

that enable them to fly.

You can see them soaring

way up in the sky.

When God designed the birds,

he said that they were good.

Flying north, south, east and west,

in the way they should.

What are birds like?

B—B

Make sign of "B"

Birds

Arms bent at elbows, Flap hands

Lay eggs

Make "E" with right hand

inside a nest

Put "E" inside cupped left hand

B—B—Birds

Same as above

Fly north, south,
east, and west

Make sign for birds again and move in
different directions
